1. Comment. A fighter regiment is stationed at Brandenburg-Briest airfield.

Flying at the field followed the usual pattern. It is interesting to note that air-to-air firing by MiG-15s was practiced with air sleeves towed by MiG-15s. Slower aircraft are now seldom used as target tow planes. The same observation, which reflects on the firing efficiency of Soviet fighter pilots, was also made at other East German airfields.

Comment. Detailed information on this radar station was transmitted previously.

On the basis of referenced report it was believed that the installation consisted of two SCR-602 sets and two Yagi type antennas. However, the equipment of the installation has not been definitely determined.
